

Consent Policy:

All surgical and endoscopy procedures require a consent for the procedure and a consent for anesthesia. The consent must be signed by the patient. If the patient is a minor a parent will be able to sign consent. If the parents do not have custody of the minor we must have proper legal documentation stating who the guardian of the child is. This will be the only person who can legally sign consent for the patient. If the patient is an adult but cannot sign consent for themselves we will need to have legal documentation showing who can legally sign on their behalf. There are no exceptions to this
